INTRODUCTION

The development of the curriculum for Diploma in Teacher Education for the Pre-Primary and Primary level (**DTE-PP&P**) is a critical milestone in the implementation of Competency Based Curriculum (CBC) in Kenya. The curriculum designs herein have been developed to prepare the teacher trainee to be able to effectively guide the learners at the Pre-Primary and Primary School level; that is from Pre-Primary One (PP1) to Grade Six (G6) in Basic Education.

It is envisaged that the teacher educator will guide the teacher trainees appropriately to embrace the shift from the Objective-Based to the Competency Based Curriculum which is hinged on use of learner-centred pedagogy for realisation of the stated expected learning outcomes. In addition, the emphasis on formative assessment to facilitate learning should be underscored as the basis for determining learner aptitude and performance. Other key aspects that have been introduced include structured micro-teaching, a longer period for the practicum and the introduction of specific Professional Courses that ensure congruence with the CBC vision, mission, pillars and guiding principles as enshrined in the *Basic Education Curriculum Framework* (KICD, 2017).

The DTE-PP&P curriculum seeks to develop the teacher to act as a facilitator in the learning process taking into consideration the different abilities and learning styles of individual target learners. The curriculum has been designed with emphasis on experiential and reflective learning to develop appropriate Pedagogical Content Knowledge (PCK); hence, the emphasis on integrated content and pedagogy for the student teachers while at college. This is to ensure that the student teacher is given adequate time to practice how to facilitate learning of the different strands prescribed in the curriculum designs.

The Curriculum designs for the DTE-PP&P are packaged according to courses of training as follows:

Professional Learning areas

- 1. Child Development and Psychology
- 2. Curriculum Studies
- 3. Educational Resources
- 4. ICT Integration in Education
- 5. Educational Assessment
- 6. Research Skills
- 7. Inclusive Education
- 8. Educational Leadership and Management
- 9. Sociological and Philosophical Foundations of Education
- 10. Historical and Comparative Foundations of Education
- 11. Micro Teaching
- 12. Practicum

Integrated Content and Pedagogy Learning areas

- 1. English
- 2. Kiswahili
- 3. Mathematics
- 4. Science and Technology
- 5. Agriculture
- 6. Home Science
- 7. Religious Education: CRE/IRE/HRE

- 8. Social Studies
- 9. Physical and Health Education
- 10. Art and Craft
- 11. Music
- 12. Indigenous Language
- 13. Foreign Languages: French/ Arabic/ German/ Mandarin (Chinese)/ KSL

REGULATIONS FOR DIPLOMA IN TEACHER EDUCATION -PRE-PRIMARY AND PRIMARY (DTE-PP&P)

Entry Requirements

The entry requirements for the Diploma in Teacher Education – Pre-Primary and Primary shall be **C Plain** Mean Grade in the Kenya Certificate of Secondary Education examination (KCSE) or its equivalent (as equated by the Kenya National Examinations Council (KNEC). The Special Needs Candidates (SNE) could be admitted with **C Minus** (-) Grade in KCSE or equivalent

Duration of Training

The duration for the Diploma in Teacher Education – Pre-Primary and Primary shall be **three years**.

Subjects Offered

The trainee undertaking the Diploma in Teacher Education – Pre-Primary and Primary (DTE –PP&P) shall take **ALL** courses specified in the DTE- PP&P curriculum; which includes Professional Courses and learning areas (subjects) related to the content in the Pre-Primary and Primary School Curriculum.

Micro-Teaching and Practicum

Micro Teaching shall be undertaken as a course and shall be a pre-requisite for the Practicum; hence a course design has been developed for it. There shall be two (2) school term practicum sessions for which guidelines shall be developed.

Award of the Diploma

To be awarded the Diploma in Teacher Education – Pre-Primary and Primary (DTE-PP&P), the candidate must achieve the following:

- i) Complete the required hours for coursework and pass the stipulated assessment as directed by the Kenya National Examinations Council (KNEC).
- ii) Complete the required hours for the Practicum and pass the stipulated assessment as directed by the Kenya National Examinations Council (KNEC).

Note: If the student teacher fails to meet the requirements for award of the Diploma in Teacher Education – Pre-Primary and Primary (DTE –PP&P) he/she will be allowed to repeat the specific component or learning area failed.

Grading

The Diploma in Teacher Education – Pre-Primary and Primary (DTE PP&P) shall be graded as stipulated by the Kenya National Examinations Council (KNEC).

NATIONAL GOALS OF EDUCATION

Education in Kenya should:

1. Foster nationalism and patriotism and promote national unity.

Kenya's people belong to different communities, races and religions, but these differences need not divide them. They must be able to live and interact as Kenyans. It is a paramount duty of education to help young people acquire this sense of nationhood by removing conflicts and promoting positive attitudes of mutual respect which enable them to live together in harmony and foster patriotism in order to make a positive contribution to the life of the nation.

2. Promote the social, economic, technological and industrial needs for national development.

Education should prepare the youth of the country to play an effective and productive role in the life of the nation.

a) Social Needs

Education in Kenya must prepare children for changes in attitudes and relationships which are necessary for the smooth progress of a rapidly developing modern economy. There is bound to be a silent social revolution following in the wake of rapid modernization. Education should assist our youth to adapt to this change.

b) Economic Needs

Education in Kenya should produce citizens with the skills, knowledge, expertise and personal qualities that are required to support a growing economy. Kenya is building up a modern and independent economy which is in need of an adequate and relevant domestic workforce.

c) Technological and Industrial Needs

Education in Kenya should provide learners with the necessary skills and attitudes for industrial development. Kenya recognizes the rapid industrial and technological changes taking place, especially in the developed world. We can only be part of this development if our education system is deliberately focused on the knowledge, skills and attitudes that will prepare our young people for these changing global trends.

3. Promote individual development and self-fulfilment

Education should provide opportunities for the fullest development of individual talents and personality. It should help children to develop their potential interests and abilities. A vital aspect of individual development is the building of character.

4. Promote sound moral and religious values.

Education should provide for the development of knowledge, skills and attitudes that will enhance the acquisition of sound moral values and help children to grow up into self-disciplined, self-reliant and integrated citizens.

5. Promote social equity and responsibility.

Education should promote social equality and foster a sense of social responsibility within an education system which provides equal educational opportunities for all. It should give all children varied and challenging opportunities for collective activities and corporate social service irrespective of gender, ability or geographical environment.

6. Promote respect for and development of Kenya's rich and varied cultures.

Education should instill in the youth of Kenya an understanding of past and present cultures and their valid place in contemporary society. Children should be able to blend the best of traditional values with the changing requirements that must follow rapid development in order to build a stable and modern society.

7. Promote international consciousness and foster positive attitudes towards other nations.

Kenya is part of the international community. It is part of the complicated and interdependent network of peoples and nations. Education should therefore lead the youth of the country to accept membership of this international community with all the obligations and responsibilities, rights and benefits that this membership entails.

8. Promote positive attitudes towards good health and environmental protection.

Education should inculcate in young people the value of good health in order for them to avoid indulging in activities that will lead to physical or mental ill health. It should foster positive attitudes towards environmental development and conservation. It should lead the youth of Kenya to appreciate the need for a healthy environment.

LEVEL LEARNING OUTCOMES FOR DIPLOMA IN TEACHER EDUCATION - PRE-PRIMARY AND PRIMARY (DTE-PP&P)

By the end of the course the teacher trainee should be able to:

- 1. Model appropriate behaviour and values for Pre-Primary and Primary school learners to emulate for development of good citizenship
- 2. Communicate and collaborate effectively with learners, peers, parents and the community to create a conducive learning environment.
- 3. Use appropriate pedagogical approaches to facilitate learning for Pre-Primary and Primary school learners in and out of the classroom
- 4. Apply inclusive practices to support all Pre-Primary and Primary school learners including those with disabilities and special educational needs
- 5. Employ ICT skills in the learning process to enhance digital literacy
- 6. Employ appropriate assessment approaches to promote effective learning
- 7. Identify and nurture learner's potential and talents for appropriate placement and transition into Junior School.
- 8. Develop environmental conservation skills in Pre-Primary and Primary school learners to promote education for sustainable development
- 9. Create innovative and effective solutions to challenges in the learning process.
- 10. Integrate pertinent and contemporary issues in learning to enable learners to cope with daily challenges.

ESSENCE STATEMENT

Science is a discipline that deals with explanations and predictions about nature and the universe while Technology is a purposeful human activity that expands the dimensions of human possibilities. It is fundamental to understanding, representing, and interacting with our natural, physical and social environment. The teacher trainee will develop foundational and holistic approach to scientific concepts in order to efficiently facilitate learning.

The achievement of Vision 2030 greatly depends on Science, Technology and Innovation. Sessional Paper No.1 of 2005 highlights the fact that for a breakthrough towards industrialization, achievement of the desired economic growth targets and social development, a high priority needs to be placed on the development of human capital through education and training by promoting the teaching of science. Sessional Paper No. 1 of 2019 equally stresses the need for sustainable basic and higher education, with an emphasis on Science, Technology and Innovation. This makes it necessary for Science to be taught in Pre-Primary and Primary Education level hence the need for training Diploma in Teacher Education (DTE).

The study of science and technology at Diploma level aims at equipping the teacher trainee with knowledge, skills and attitudes necessary for teaching environmental activities, science and technology in Pre-Primary and Primary school respectively. The course also enables the teacher to participate in conserving the environment for sustainable development. This course is linked to other learning areas such as Home Science, Agriculture, Physical Education and Social Studies.

The suggested methods of instruction include; Inquiry Based Learning (IBL), Project Based Learning (PBL), Problem based learning (PBL) and Pedagogical Content Knowledge (PCK) (Shulman, 1986-87). These modes of instruction are anchored on John Dewey's social constructivist theory, which emphasizes on learning through hands-on activities and Vygotskian sociocultural theory (Vygotsky, 1986), which regards teacher knowledge as both dynamic and situated.

GENERAL LEARNING OUTCOMES

By the end of the course, the teacher trainee should be able to:

- 1. Use appropriate pedagogical and professional competencies to facilitate learning of Environmental Activities, Science and Technology.
- 2. Develop environmental conservation skills and attitudes to promote education for sustainable development.
- 3. Apply problem solving and critical thinking skills acquired from scientific and technological knowledge in life.
- 4. Apply digital literacy skills to ease comprehension of scientific concepts for learners in Pre-primary and primary school.
- 5. Select, develop and utilize appropriate instructional resources in learning of scientific concepts.
- 6. Integrate pertinent and contemporary issues to address personal, community and environmental challenges.
- 7. Appreciate the importance of Environmental Activities, Science and Technology as a foundation for career formation and further education and training.

STRAND 1.0 SCIENCE AND THE ENVIRONMENT

				Question(s)
2.0 Living	2.9	By the end of the sub	The teacher trainee to:	Why is the
things	Reproduction	strand, the teacher	• use specimens, print or digital	study of
	in Plants	trainee should be able	media to observe the structure of a	reproduction in
		to:	flower and relate it to its	plants relevant?

(5 Hours)	 a) relate the structure of the flower to its functions, b) describe types of pollination in flowering plants, c) investigate features and mechanisms that favour cross pollination in plants, d) describe the agents of pollination in flowering plants, e) describe the processes of fertilization, fruit and seed formation in flowering plants. f) outline the methods of fruit and seed 	functions, use print or digital media to observe pollination and identify cross and self- pollination, use print or digital media to explore and discuss the advantages of pollination (cross and self-pollination), use print or digital media to explore the adaptive features and mechanisms that favor cross pollination or discourage self-pollination, discuss agents of pollination in flowering plants, use print or digital media to find out the characteristics of insect and wind pollinated flowers, use print or digital media to observe and discuss the processes of fertilization, and fruit and seed formation in flowering plants. Write an essay on this,
	f) outline the methods of fruit and seed dispersal in plants,	formation in flowering plants. Write an essay on this, use specimens, digital devices,
	g) appreciate the importance of	online, resources and other visual aids to observe and discuss methods

	flowering and non- flowering plants to man and nature, h) mainstream (PCIs) in teaching of reproduction in plants.	of fruit and seed dispersal. Write a report on dispersal, use flowers to presents a lessons on structure and function of parts of a flower, show how PCIs can be integrated in learning experiences for learning reproduction in plants.	
--	--	--	--

Core competencies developed:

- **Pedagogical content knowledge** as the teacher trainee prepares and teaches lessons.
- **Digital literacy skills** as the teacher trainee use digital devices and online resources.

Values:

• **Respect** as the teacher trainee participate in group work.

STRAND 4.0 FORCE AND ENERGY

Strand	Sub Strand	Specific Learning Outcomes	Suggested Learning Experiences	Suggested Key Inquiry
		Outcomes		Question(s)
4.0 Force and Energy	4.1 Force and Gravity (5 Hours)	By the end of the sub strand, the teacher trainee should be able to: a) explain force as used in science, b) demonstrate the effects of force on objects, c) explain gravity as a force in nature, d) demonstrate effects of gravity on falling objects, e) distinguish between mass and weight as used in science, f) appreciate the importance of gravity in day to day life, g) develop a lesson on force and gravity for online learning.	 The teacher trainee to: use print or non-print to search for the meaning of meaning of force as used in science, use real objects, digital devices and other visual aids to observe and demonstrate the effects of force on objects, brainstorm on the meaning of gravity as used in science, carry out activities to demonstrate gravitational force, investigate the relationship between mass and weight as used in science (Weight = Mass x gravity), present a practical lesson on the effect of gravity on falling objects to online learners. 	How does gravitational force affect objects in nature?

Core competencies to be developed:

• Learning to learn and reflective practice as the teacher trainee participates in class discussion and demonstrates

the effect of gravity on objects in nature.

• **Digital literacy skills** as the teacher trainee uses digital devices and other visual aids to observe and demonstrate the effects of force on objects.

Value:

- Unity, Responsibility and Respect as the teacher trainee works in groups.
- Integrity as the teacher trainee generates own data.

4.0 Force	4.5 Light	By the end of the sub	The teacher trainee to:	Why is light
and	Energy	strand, the teacher trainee	• use print and online resources to search	important in
Energy		should be able to:	information on different sources of light	our daily
- 80	(5 Hours)	 a) describe sources of light in the immediate environment, b) conduct an experiment on rectilinear propagation of light, 	 use print and online resources to access animations and illustrations on propagation of light carry out experiments to demonstrate that light travels in a straight line use a source of light to test and categorise materials as either transparent, translucent or opaque, 	life?
		c) classify materials into transparent, translucent and opaque, d) illustrate the formation of shadows and eclipses in nature,	 use models and digital resources to demonstrate formation of shadows and eclipses, discuss the formation of different types of eclipses, use opaque objects and source of light to illustrate formation of different phases of the moon, 	

- e) describe the formation of phases of the moon in the lunar cycle,
- f) perform experiments to verify the laws of reflection of light on plane surfaces,
- g) illustrate the characteristics of images formed by a plane mirror,
- h) explain the applications of reflection of light on plane surfaces in everyday life,
- i) conduct experiments on refraction of light,
- j) appreciate applications of light,
- k) prepare schemes of work and lesson

- carry out experiments to verify the laws of reflection of light on a plane surface,
- carry out experiments to observe and identify the characteristics of images formed by the plane mirror,
- use print and online resources to access animations and illustrations on characteristics of images formed by plane mirrors,
- brainstorm on the applications of reflection of light on plane surfaces in everyday life,
- use objects and online resources to demonstrate applications of refraction of light in day to day life,
- illustrate the applications of reflection of light (to include periscope and kaleidoscope)
- design and carry out activities to illustrate refraction of light,
- use objects and online resources to illustrate the applications of refraction of light in day to day life,
- discuss applications of light in income generating activities,

	plans on light energy in Science.	 generate schemes of work and lesson plans based on the strand of Energy in the Science and Technology Curriculum Designs Project 1. Make a kaleidoscope and periscope. Project 2. Make a screen for projecting still images. 	
--	-----------------------------------	--	--

Pedagogical content knowledge as the teacher trainee carries out a practical lesson on propagation, reflection and refraction of light.

Learning to learn and reflective practice as the teacher trainee makes a kaleidoscope and/or screen for projecting still images for facilitating learning of scientific concepts involving light energy.

Value:

Responsibility and **Respect** as the teacher trainee works with peers in groups when carrying out activities.

Strand	Sub Strand	Specific Learning Outcomes	Suggested Learning Experiences	Suggested Key Inquiry Question(s)
4.0 Force and Energy	4.6 Sound Energy (5 Hours)	By the end of the substrand, the teacher trainee should be able to: a) identify the sources of sounds in the immediate environment, b) conduct experiment to demonstrate that sound is produced by vibrating objects, c) conduct	 The teacher trainee to: brainstorm on the various sources of sound in the environment, use print or online resources to search for information on different sources of sound, carry out activities to demonstrate that sound is produced by vibrating objects (<i>Hitting</i>, <i>plucking</i> and <i>blowing</i>), carry out experiments to demonstrate that sound requires a material medium for propagation, use print and online resources to search for information on the nature of sound waves, 	Question(s) Why is sound important?
		experiments to demonstrate that sound requires material medium for propagation,	 demonstrate movement of sound waves in nature, play different musical instruments to produce sounds of different qualities such as soft, loud and sharp, 	

	d) illustrate the nature of sound waves in life, e) perform experiments to show variations in volume and pitch of sound, f) demonstrate how echoes are formed from sound waves in the environment, g) demonstrate the application of echoes in nature, h) design authentic assessment tasks for sound energy in Science and Technology.	 carry out activities to demonstrate volume and pitch of sound, use digital devices and online resources to access animations and illustrations on the nature of sound, echo formation, sound pollution and how to minimize them in the environment, carryout activities with peers to demonstrate formation of echoes and how to minimize them in the environment, use digital devices and online resources to show applications of echoes, discuss the causes and effects of sound pollution and measures to use against the pollution discuss economic importance of echoes in day to day life, develop authentic assessment tasks on the strand on Sound in Science and Technology Curriculum Designs Project 1: Make sound cones, sound amplifiers and ear muffs.
--	---	--

- **Pedagogical content knowledge** as teacher trainees make choices of materials for the practical lesson and carry out the lesson on sound energy.
- Assessment competency as teacher trainees critique peer lessons and assessment rubrics.
- **Self-Efficacy** as the teacher trainee presents own lessons for peer assessment.

Value:

- Unity and Respect as the teacher trainee works with peers.
- **Responsibility** as the teacher trainee takes precautions from loud sound.
