#### NATIONAL GOALS OF EDUCATION

### 1. Foster nationalism, patriotism, and promote national unity

Kenya's people belong to different communities, races and religions and should be able to live and interact as one people. Education should enable the learner acquire a sense of nationhood and patriotism. It should also promote peace and mutual respect for harmonious co-existence.

### 2. Promote social, economic, technological and industrial needs for national development

Education should prepare the learner to play an effective and productive role in the nation.

#### a) Social Needs

Education should instil social and adaptive skills in the learner for effective participation in community and national development.

#### b) Economic Needs

Education should prepare a learner with requisite competences that support a modern and independent growing economy. This should translate into high standards of living for every individual.

# c) Technological and Industrial Needs

Education should provide the learner with necessary competences for technological and industrial development in tandem with changing global trends.

# 3. Promote individual development and self-fulfilment

Education should provide opportunities for the learner to develop to the fullest potential. This includes development of one's interests, talents and character for positive contribution to the society.

### 4. Promote sound moral and religious values

Education should promote acquisition of national values as enshrined in the Constitution. It should be geared towards developing a self-disciplined and ethical citizen with sound moral and religious values.

### 5. Promote social equity and responsibility

Education should promote social equity and responsibility. It should provide inclusive and equitable access to quality and differentiated education; including learners with special educational needs and disabilities. Education should also provide the learner with opportunities for shared responsibility and accountability through service learning.

### 6. Promote respect for and development of Kenya's rich and varied cultures

Education should instil in the learner appreciation of Kenya's rich and diverse cultural heritage. The learner should value own and respect other people's culture as well as embrace positive cultural practices in a dynamic society.

# 7. Promote international consciousness and foster positive attitudes towards other nations

Kenya is part of the interdependent network of diverse peoples and nations. Education should therefore enable the learner to respect, appreciate and participate in the opportunities within the international community. Education should also facilitate the learner to operate within the international community with full knowledge of the obligations, responsibilities, rights and benefits that this membership entails.

### 8. Good health and environmental protection

Education should inculcate in the learner the value of physical and psychological well-being for self and others. It should promote environmental preservation and conservation, including animal welfare for sustainable development.

#### LEVEL LEARNING OUTCOMES FOR PRIMARY EDUCATION

By the end of the Primary Education, the learner should be able to:

- a) Communicate appropriately using verbal and or non-verbal modes in a variety of contexts.
- b) Demonstrate mastery of number concepts to solve problems in day to day life
- c) Demonstrate social skills, moral and religious values for positive contribution to society
- d) Develop one's interests and talents for personal fulfilment
- e) Make informed decisions as local and global citizens of a diverse, democratic society in an interdependent world.
- f) Explore, manipulate, manage and conserve the environment effectively for learning and sustainable development
- g) Acquire digital literacy skills for learning and enjoyment.
- h) Appreciate the country's rich, diverse cultural heritage for harmonious living

#### ESSENCE STATEMENT

Science and Technology is a learning area which engages in the human pursuit to understand the relationships between the living and non-living universe. Science is a discipline that deals with explanations and predictions about nature and the universe while Technology is the application of science to create devices that can solve problems and do tasks.

The achievement of Vision 2030 greatly depends on Science, Technology and Innovation. Sessional Paper No.1 of 2005 highlights the fact that for a breakthrough towards industrialisation, achievement of the desired economic growth targets and social development, a high priority needs to be placed on the development of human capital through education and training by promoting the teaching of sciences and information technology. This is also highlighted in the Sessional Paper 14, 2012 which stresses the need for sustainable basic and higher education, with an emphasis on Science, Technology and Innovation (ST&I). This makes it necessary for Science and Technology to be taught in Upper Primary Education level.

This learning area builds on the competencies introduced at the lower primary under the learning area of Environmental Activities and equips the learner with pre-requisite skills which are required in Integrated Science and Pre-technical and Pre-career studies at the lower secondary level. These enable learners to prepare for Science, Technology, Engineering and Mathematics (STEM) in subsequent levels of the education cycle. Inquiry based learning (IBL), Project based learning (PBL), Problem based learning (PBL) and Social Scientific Issue learning (SSI) approaches will be employed throughout the learning experiences in this area as advocated for by John Dewey's social constructivist theory which emphasises the learner should be given an opportunity to learn through hands-on activities. Engineering design shall be used as a pedagogical strategy to bridge science concepts with other learning areas to solve simple open-ended problems, develop creative thinking and analytical skills among learners, make decisions, and consider alternative solutions to address a variety of situations.

#### SUBJECT GENERAL LEARNING OUTCOMES

By the end of the course, the learner should be able to:

- Interact with the environment for learning and sustainable development.
- Apply digital literacy skills appropriately for communication, learning and enjoyment.
- Appreciate the contribution of science and technology in the provision of innovative solutions.
- Use scientific knowledge to observe and explain the natural world.
- Make functional discoveries that impact individuals and the wider society.
- Use innovative approaches as well as critical thinking and problem solving skills to stimulate scientific inquiry, at the local, national and global levels for lifelong learning.

STRAND 1.0 LIVING THINGS AND THEIR ENVIRONMENT

			mushrooms, record and	

discuss with peers.
Note:
-Learners are guided to
observe precautions and
safe disposal of wastes when
handling fungi.

- Communication and collaboration: The learner speaks clearly and effectively during discussions on the economic importance of moulds, yeast and mushrooms.
- **Self-efficacy:** The learner successfully grows moulds on food materials, observes and shares with peers.

#### Values:

• **Responsibility**: The learner observes safety when handling fungi.

#### **PCIs**:

- Financial Literacy: The learner searches for information on the economic importance of moulds, yeast and mushrooms.
- Environmental conservation: The learner practises safe disposal of wastes generated from growing Fungi.

### Links to other learning areas:

- The information on the economic importance of Fungi is linked to food production in Agriculture and Nutrition.
- The information on growing Fungi is linked to appreciation of God's creation in Religious Education.

Strand	Sub Strand	Specific learning outcomes	Suggested learning experiences	Suggested Key inquiry question
1.0 Living	1.2	By the end of the sub	The learner is guided to:	What are the common fea

		nature.	invertebrates and their	

	characteristics; practise safety precautions in handling invertebrates,  make an inventory of common invertebrates in their locality, discuss the economic importance of invertebrates.	
--	---	--

- **Critical thinking and problem solving:** The learner displays open mindedness as they discuss the economic importance of invertebrates.
- Creativity and Imagination: The learner makes observations and creates an inventory of common invertebrates in their locality.

#### Values:

• Love: The learner cares for others as they explore the school compound and their locality to identify different invertebrates and their characteristics.

#### **PCIs**:

- Animal Welfare: The learner cares for the invertebrates as they explore the school compound and their locality to identify different invertebrates and their characteristics.
- Safety and security: The learner observes safety precautions in handling invertebrates.
- **Health promotion issues:** The learner discusses the role of invertebrates in transmission of diseases.

# Links to other learning areas:

• The information on transmission of diseases is linked to communicable diseases in Agriculture and Nutrition.

arteries, high blood	
pressure	
and heart attack)	

- Self-Efficacy: The learner successfully develops a routine plan for maintaining a healthy circulatory system.
- **Digital literacy:** The learner uses simulation software, online interactive platforms or digital images to illustrate the human circulatory system.

#### Values:

- **Responsibility:** The learner shows resilience in practising ways for maintaining a healthy circulatory system.
- **Unity:** The learner respects others opinions as they collaboratively discuss and develop a routine plan on maintaining a healthy human circulatory system.

#### PCIs:

• **Health promotion issues:** The learner discusses ways of maintaining a healthy human circulatory system and develops a routine for maintaining a healthy circulatory system.

### Links to other learning areas:

- The information on common health conditions of the human circulatory system is linked to lifestyle diseases in Agriculture and Nutrition.
- The modelling of the human circulatory system is linked to modelling in Creative arts and Sports.

			Project:	
			<ul> <li>Learners to make candles using waste</li> </ul>	
			candle wax or beeswax,	
			• Learners to repair broken plastic	
			containers.	

- **Communication and collaboration:** The learner listens keenly and actively as they brainstorm the meaning of change of state of matter.
- Learning to learn: The learner procedurally carries out activities to demonstrate change of state of matter.

#### **Values**

• **Respect**: The learner appreciates diverse opinions of others while discussing the change of state of matter in everyday life.

### **Pertinent and contemporary Issues**

• Socio-economic issues(Environmental Education): The learners make candles using waste candle wax or beeswax and repairing broken plastic containers

# Linkage to other learning areas:

• Agriculture and Nutrition – The learner appreciate evaporation as a process of drying clothes and cereals

Strand	Sub Strand	Specific learning outcomes	Suggested learning experiences	Key inquiry question
2.0 Matter	<ul> <li>2.2 Composition of air (16 lessons)</li> <li>Composition of air in the atmosphere</li> <li>Uses of different components of air</li> <li>Air pollution</li> </ul>	the learner should be able to: a) identify the	<ul> <li>brainstorm on air and its constituent,</li> <li>draw a pie chart showing percentage composition of components of air,</li> <li>carry out activity to investigate the presence of oxygen in air collaboratively (Use a burning candle),</li> </ul>	the

pollution.
Note: observe safety precautions
Y Y A
in air polluted environments
(Example: practice use of dust
masks, goggles, overcoats).
Project:
Learners are guided to make posters on
common air pollutants, dangers of air
pollution and ways of controlling air
pollution.

- **Citizenship:** The learner engages in critical and constructive dialogue as they discuss on air pollutants and come up with ways of reducing air pollution in the environment.
- Learning to learn: The learner learns independently as they explore the school and neighborhood to identify air pollutants.

#### **Values**

- **Responsibility:** The learner observes safety precautions in an air polluted environment.
- **Patriotism**: The learner serves the community by making posters on common air pollutants, dangers of air pollution and ways of controlling air pollution to educate members of the community.

### **Pertinent and Contemporary Issues:**

• Socio-economic and environmental issues (Environmental education and climate change): The learner practices methods of reducing air pollution.

# Link to other learning areas

• Mathematics: The learner draws a pie chart showing the percentage composition of components of air.

<b>Assessment Rubric</b>

			• discuss the applications of	
			movement of light through	

different media (mirrors,
periscope, kaleidoscope, lenses,
magnifying glass, hand lens,
mirage, rainbow).
Project: Learner uses locally available
resources to make a functional periscope.

- **Digital literacy**: The learner interacts with digital technology as they use digital or print media to search for information on the movement of light through materials, image formation on plane mirrors, the formation of shadows, eclipses and rainbows in nature.
- Communication and Collaboration: The learner cooperates with peers as they discuss the applications of movement of light in different media.

#### Values:

• Unity: The learner works harmoniously with peers as they use locally available resources to make a functional periscope.

### **PCIs:**

• Socio-economic issues: The learner observes safety and security as they use plane mirrors to perform experiments to demonstrate image formation and describe the characteristics of images formed.

### Links to other Learning areas:

• Home Science when lighting up the home.

3.0 Force and energy    Machines   By the end of the sub strand, the learner should be able to:   a) identify common levers used in day to day life     • Parts of levers   • Uses of levers in day to day life     • Uses of levers in day to day life     • Classify levers into the three classes, doing machines     • Our everyday life     • Drainstorm on the meaning of levers as simple machines,     • Work in groups to identify parts of a lever (fulcrum/pivot, effort, and load),     • Carry out activities to group levers into the three classes, doing machines     • Drainstorm on the meaning of levers as simple machines,     • Work in groups to identify parts of a lever (fulcrum/pivot, effort, and load),     • Carry out activities to group levers into the three classes (first, second and third class levers),     • Carry out activities in     • Carry out activities     • Carry out activitie

guided to make and use a beam	
balance from locally available	
materials.	_

- Creativity and imagination: The learner assembles different parts to make a beam balance from locally available materials.
- Learning to learn: The learner carries out activities with peers as they demonstrate the use of common levers as simple machines.

#### Values:

• **Respect:** The learner displays positive regard for self and others as they work together in groups to identify parts of a lever.

#### **PCIs:**

• Citizenship education: The learner exercises care and protection for one another while performing experiments to demonstrate the use of common levers as simple machines.

## Link to other learning areas:

- Agriculture and Nutrition: Learner applies the principle of levers in farm tools, use of cutlery; spoons and bottle openers.
- Creative Arts: Learner applies the principle of simple leavers as they play on a seesaw.

3.0 Force and energy  3.3 Slopes as simple sub strand, the learner should be able to:  (14 lessons)  • Types of slopes used as simple machines, b) demonstrate • Uses of slopes  • Dearner is guided to:  • discuss the meaning of slope as a simple machine (inclined plane),  • give practical examples on where slopes are used to make work easier around the school environment (ladders, ramps, staircase, road winding up-hill, wedge, roofs, loading a lorry),  • discuss how slopes are used to make work easier in day to day life,  • discuss the meaning of slope as a simple machine (inclined plane),  • discuss the meaning of slope as a simple machine (inclined plane),  • discuss the meaning of slope are used to make work easier around the school environment (ladders, ramps, staircase, road winding up-hill, wedge, roofs, loading a lorry),  • discuss how slopes are used to make work easier in day to day life,	Strand	Sub Strand	Specific learning outcomes	Suggested learning experiences	Key inquiry question

### **CSL** at Upper Primary (grade 4-6)

At this level, the goal of the CSL activity is to provide linkages between concepts learnt in the various Learning Activities and the real life experiences. Learners begin to make connections between what they learn and the relevance to their daily life. CSL is hosted in the Social studies learning area. The implementation of the CSL activity is a collaborative effort where the class teacher coordinates and works with other subject teachers to design and implement the integrated CSL activity. Though they are teacher-guided, the learners should progressively be given more autonomy to identify problems and come up with solutions. The safety of the learners should also be taken into account when selecting the CSL activity. The following steps for the integrated CSL activity should be staggered across the school terms:

## Steps in carrying out the integrated CSL activity

## 1) Preparation

- Map out the targeted core competencies, values and specific learning areas skills for the CSL activity
- Identify resources required for the activity (locally available materials)
- Stagger the activities across the term (Set dates and time for the activities)
- Communicate to learners, parents/caregivers/guardians, school administration, teachers and other relevant stakeholders in the school community
- Identify and develop assessment tools

### 2) Implementation CSL Activity

- Assigning roles to learners.
- Ensure every learner actively participates in the activity
- Observe learners as they carry out the CSL activity and record feedback.
- Use an appropriate assessment tool to assess both the process and the product (Assess learner's work from the beginning to the end product)
- Assess the targeted core competencies, values and subject skills.

### 3) Reflection on the CSL Activity

Conduct a self-evaluation session with learners on the integrated CSL activity undertaken by discussing the following:

- what went well and why
- what did not go well and why,
- what can be done differently next time
- what they have learnt.

There will be **one** integrated CSL activity that will be conducted **annually.** The thematic areas for the integrated CSL activity will be derived from the broader categories of the PCIs and concepts from the various Learning Areas. Teachers are expected to vary the themes yearly to allow learners to address different PCIs within their contexts. There should be a linkage between the skills from the learning areas and the themes.

The integrated CSL activity will take a Whole School Approach (WSA) where the entire school community is involved (learners, parents/caregivers/guardians, school administration, teachers). Parents/caregivers/guardians are key stakeholders in the planning and execution of the CSL activity. Although the teacher takes the lead role in the planning and integration of the CSL activity, learners will be expected to participate actively in the whole process.

The CSL activity provides an opportunity for the development of core competencies and the nurturing of various values. The teacher is expected to vary the core competencies and values emphasised in the activity yearly.

#### Assessment of the CSL Activity

Assessment of the integrated CSL activity will focus on 3 components namely: skills from various learning areas applied in carrying out the activity, and core competencies and values demonstrated. Assessment should focus on both the process and end product of the CSL activity. The teacher will assess learners in groups using various tools such as an observation schedule, checklist or rating scale or any other appropriate tool.
