NATIONAL GOALS OF EDUCATION

Education in Kenya should:

i) Foster nationalism and patriotism and promote national unity.

Kenya's people belong to different communities, races and religions, but these differences need not divide them. They must be able to live and interact as Kenyans. It is a paramount duty of education to help young people acquire this sense of nationhood by removing conflicts and promoting positive attitudes of mutual respect which enable them to live together in harmony and foster patriotism in order to make a positive contribution to the life of the nation.

ii) Promote the social, economic, technological and industrial needs for national development.

Education should prepare the youth of the country to play an effective and productive role in the life of the nation.

a) Social Needs

Education in Kenya must prepare children for changes in attitudes and relationships which are necessary for the smooth progress of a rapidly developing modern economy. There is bound to be a silent social revolution following the wake of rapid modernisation. Education should assist our youth to adapt to this change.

b) Economic Needs

Education in Kenya should produce citizens with the skills, knowledge, expertise and personal qualities that are required to support a growing economy. Kenya is building up a modern and independent economy which is in need of an adequate and relevant domestic workforce.

c) Technological and Industrial Needs

Education in Kenya should provide learners with the necessary skills and attitudes for industrial development. Kenya recognises the rapid industrial and technological changes taking place, especially in the developed world. We can only be part of this development if our education system is deliberately focused on the knowledge, skills and attitudes that will prepare our young people for these changing global trends.

iii) Promote individual development and self-fulfilment

Education should provide opportunities for the fullest development of individual talents and personality. It should help children to develop their potential interests and abilities. A vital aspect of individual development is the building of character.

iv) Promote sound moral and religious values.

Education should provide for the development of knowledge, skills and attitudes that will enhance the acquisition of sound moral values and help children to grow up into self-disciplined, self-reliant and integrated citizens.

v) Promote social equality and responsibility.

Education should promote social equality and foster a sense of social responsibility within an education system which provides equal educational opportunities for all. It should give all children varied and challenging opportunities for collective activities and corporate social service irrespective of gender, ability or geographical environment.

vi) Promote respect for and development of Kenya's rich and varied cultures.

Education should instil in the youth of Kenya an understanding of past and present cultures and their valid place in contemporary society. Children should be able to blend the best of traditional values with the changing requirements that must follow rapid development in order to build a stable and modern society.

vii) Promote international consciousness and foster positive attitudes towards other nations.

Kenya is part of the international community. It is part of the complicated and interdependent network of peoples and nations. Education should therefore lead the youth of the country to accept membership of this international community with all the obligations and responsibilities, rights and benefits that this membership entails.

viii. Promote positive attitudes towards good health and environmental protection.

Education should inculcate in young people the value of good health in order for them to avoid indulging in activities that will lead to physical or mental ill health. It should foster positive attitudes towards environmental development and conservation. It should lead the youth of Kenya to appreciate the need for a healthy environment.

LEARNING OUTCOMES FOR JUNIOR SCHOOL

By end of Junior School, the learner should be able to:

- 1. Apply literacy, numeracy and logical thinking skills for appropriate self-expression.
- 2. Communicate effectively, verbally and non-verbally, in diverse contexts.
- 3. Demonstrate social skills, spiritual and moral values for peaceful co-existence.
- 4. Explore, manipulate, manage and conserve the environment effectively for learning and sustainable development.
- 5. Practise relevant hygiene, sanitation and nutrition skills to promote health.
- 6. Demonstrate ethical behaviour and exhibit good citizenship as a civic responsibility.
- 7. Appreciate the country's rich and diverse cultural heritage for harmonious co-existence.
- 8. Manage pertinent and contemporary issues in society effectively.
- 9. Apply digital literacy skills for communication and learning.

ESSENCE STATEMENT

Integrated science is a new learning area that enables learners to apply distinctive ways of logical valuing, thinking and working to understand natural phenomena in the biological, physical and technological world. The emphasis of science education at Junior School level is to enhance learners' scientific thinking through learning activities that involve the basic science process skills. The subject area is expected to create a scientific culture that inculcates scientific literacy to enable learners to make informed choices in their personal lives and approach life challenges in a systematic and logical manner.

Integrated Science provides the learner with the basic requisite skills, knowledge, values and attitudes necessary for specialization in STEM pathway at Senior School level. The rationale for inclusion of Integrated Science is anchored in The Kenya Vision 2030, Sessional Papers No. 14 of 2012, and No. 1 of 2019, which all underscore the importance of Science, Technology and Innovation in education and training. The subject area is to be taught through inquiry-based learning approaches with emphasis on the 5Es: engagement, exploration, explanation, elaboration and evaluation.

GENERAL LEARNING OUTCOMES

By the end of Junior School, the learner should be able to:

- 1. Acquire scientific knowledge, skills, values and attitudes to make informed choices on career pathways at Senior School.
- 2. Select, improvise and safely use basic scientific tools, apparatus, materials and chemicals effectively in everyday life.
- 3. Explore, manipulate, manage and conserve the environment for learning and sustainable development.
- 4. Practise relevant hygiene, sanitation and nutrition skills to promote good health.
- 5. Apply the understanding of body systems with a view to promote and maintain good health.
- 6. Develop capacity for scientific inquiry and problem solving in different situations.
- 7. Appreciate the use use of scientific knowledge, skills, principles and practices in everyday life.
- 8. Apply acquired scientific knowledge, skills, principles and practices in everyday life.

Strand	Sub Strand	Specific Learning Outcomes	Suggested Learning Experiences	Suggested Key Inquiry Question
1.0 Mixtures, Elements and Compounds	 1.1 Structure of the atom (14 lessons) Structure of the atom (protons, electrons, neutrons) Atomic number and mass number of elements Electron arrangement of elements Energy level diagrams (cross or dot) Metals and non – metals Note: (use the first 20 elements of the periodic table; do not 	 By the end of the sub strand the learner should be able to: a) describe the structure of the atom, b) determine the mass number of elements, c) draw the electron arrangement in atoms using dot or cross diagrams, d) classify elements into metals and non-metals, e) show interest in classifying elements into metals and non- metals. 	 The learner is guided to: discuss the meaning of the atom and illustrate its structure, work out the mass number of an element with peers, write the electron arrangements of elements, illustrate the electron arrangement in atoms using dot or cross diagrams collaboratively, use electron arrangement to classify elements into metals and non-metals, where possible use digital media to observe animations or videos on the structure of an atom and electron arrangement. Project: model the atomic structure of selected elements of the periodic 	How is the structure of the atom important?

STRAND 1.0: MIXTURES, ELEMENTS AND COMPOUNDS

<i>introduce periodic</i> <i>table at this level</i>)	table using locally available materials.

Core competencies to be developed:

- **Communication and collaboration:** The learner speaks clearly and effectively as they discuss with peers the meaning of the atom and illustrate its structure.
- **Creativity and imagination**: The learner experiments and comes up with models of atoms of selected elements from locally available materials.

Pertinent and Contemporary Issues:

Socio-economic issues (cyber security): The learner observes cyber security measures when using digital media to observe animations or videos on the structure of an atom and electron arrangement.

Values:

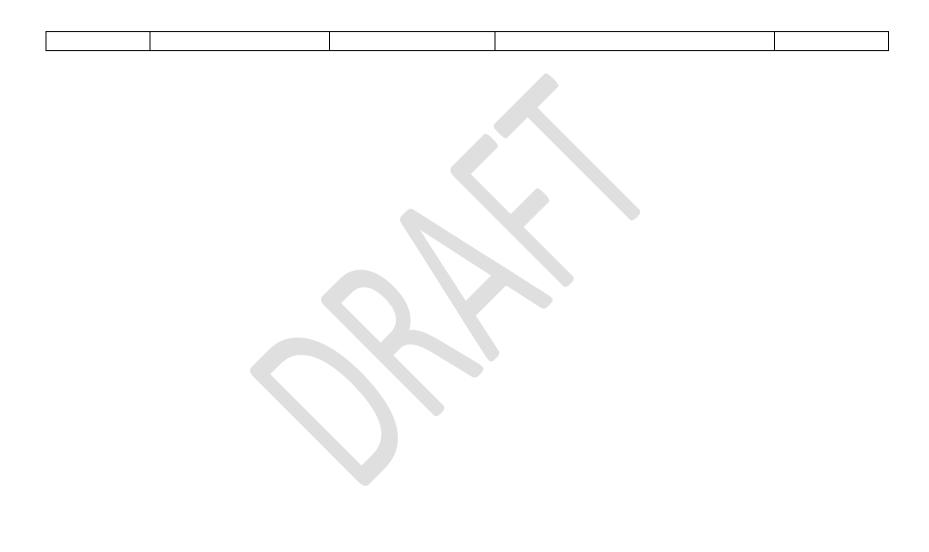

- Unity: The learner respects others opinions while having group discussions
- **Integrity:** The learner displays honesty while using digital devices to search for information on the structure of an atom, electron arrangement, atomic number and mass number of elements.

Links to other subjects

• Mathematics: The learner works out the mass number of elements.

Strand	Sub strand	Specific Learning Outcomes	Suggested Learning Experiences	Suggested Key Inquiry Question	
1.0 Mixtures, Elements and Compounds1.2 Metals and Alloys (16 lessons)By the end of the sub strand, the learner should be able to: a) describe the physical properties 		 The learner is guided to: identify metals and non-metals in their environment, carry out experiments to demonstrate the physical properties of metals, discuss the composition of common alloys with peers, identify some items from the locality that have been made from alloys with peers, discuss the uses of common metals and alloys, discuss causes, effects and ways of controlling rusting of metals, where possible, use digital or print media to search for information on the physical properties of metals and common alloys. 	How are alloys important in day-day life?		

STRAND 1.0: MIXTURES, ELEMENTS AND COMPOUNDS

Core competencies to be developed

- Communication and collaboration: The learner works with peers to discuss the composition of common alloys
- **Digital literacy:** The learner interacts with digital technology as they search for information using digital devices on physical and chemical properties of metals and common alloys.

Pertinent and Contemporary Issues (PCIs)

• Financial Literacy: The learner appreciates the importance of metals and common alloys in day to day life as they discuss the uses of common metals and alloys

Values

- **Respect:** The learner accommodates others' opinions during group discussions on uses of metals and common alloys.
- Peace: The learner avoids harming others when carrying out experiments to demonstrate the physical properties of metals

Link to other subjects

- Pre- Technical Studies: The learner learns about common metals and alloys used in workshops.
- Agriculture and Nutrition: The learner uses utensils made from metals and their alloys.

Strand	Sub Strand	Specific Learning Outcomes	Suggested Learning	Suggested Key
			Experiences	Inquiry
				Questions
1.0	1.3 Water hardness	By the end of the sub strand,	The learner is guided to:	1.What is the
Mixtures,		the learner should be able to:	• Collect and observe water	importance of
Elements and	(14 lessons)	a) describe the physical	from different sources,	different types of
Compounds		properties of water,	compare them in terms of	water?
	• Physical properties of	b) distinguish between hard	appearance, odour, taste	2.Why is hard
	water (taste, colour,	and soft water in nature,	and boiling point (taste	water preferred for
	odour and boiling	c) apply methods of softening	water from safe sources),	drinking?

	• Hard and soft water	life,	compare the lathering	
	• Methods of softening	d) outline advantages and	abilities of various	
	temporary hard water	disadvantages of hard and	samples of unboiled water	
	(boiling, addition of	soft water,	with soap collaboratively,	
	washing soda,	e) appreciate the applications	• group the samples into	
	distilling,	of soft and hard water in day	hard and soft water,	
	Note. avoid ion exchange	to day life.	• explain the meaning of	
	 Advantages and 		hard and soft water,	
	disadvantages of hard		• discuss the advantages and	
	water and soft water		disadvantages of soft and	
			hard water,	
			• perform various activities	
			for softening hard water,	
			• where possible, use digital	
			or print media to search	

for information, on the methods of softening hard water.	

Core competencies to be developed:

- Learning to learn: The learner reflects on their experiences as they apply methods of softening hard water in day to day life.
- Critical thinking and problem solving: The learner develops interpretation skills as they relate the lathering ability of water to hardness and softness of water.

Pertinent and Contemporary Issues (PCIs):

• Financial literacy: The learner practises how to save on soap by using soft water for laundry.

Values:

- **Responsibility:** The learner plays a role when carrying out experiments on softening hard water.
- **Respect:** The learner gives each other an opportunity to air their views as they discuss in a group the differences between hard and soft water.

Link to other subjects

• Agriculture and Nutrition: The learner uses soft water in laundry work.

Assessment Rubric Indicator/Level	Exceeds expectation	Meets expectation	Approaches expectation	Below expectation
Ability to describe the structure of the atom	Describes the structure of the atom comprehensively	Describes the structure of the atom sufficiently	Describes the structure of the atom partially	Describes the structure of the atom superficially
Ability to classify elements into metals and non-metals	Classifies all elements into metals and nonmetals	Classifies most elements into metals and nonmetals	Classifies some elements into metals and nonmetals	Classifies a few elements into metals and nonmetals with prompts
Ability to outline uses of metals and alloys	Outlines uses of all metals and alloys correctly	Outlines uses of most metals and alloys correctly	Outlines uses of some metals and alloys correctly	Outlines uses of a few metals and alloys correctly with prompts
Ability to explain the effect of rusting on metals	Explains the effect of rusting on metals in details comprehensively	Explains the effect of rusting on metals sufficiently	Explains the effect of rusting on metals cursory	Explains the effect of rusting on metals superficially
Ability to outline advantages and disadvantages of hard and soft water	Outlines advantages and disadvantages of hard and soft water in details	Outlines advantages and disadvantages of hard and soft water	Outlines advantages and disadvantages of hard and soft water partially	Outlines advantages and disadvantages of hard and soft water superficially
Ability to apply different methods to soften temporary hard water	Applies all appropriate methods to soften temporary hard water	Applies appropriate methods to soften temporary hard water	Applies an appropriate method to soften temporary hard water	Applies an inappropriate method to soften temporary hard water

Strand	Sub Strand	Specific Learning Outcomes	Suggested Learning Experiences	Suggested Key Inquiry Questions
2.0 Living Things and their Environment	• Parts of a leaf	 By the end of the sub strand, the learner should be able to: a) identify external and internal parts of a leaf, b) explain adaptations of the leaf to photosynthesis, c) describe the process of photosynthesis, d) investigate the conditions necessary for photosynthesis, e) appreciate the process of photosynthesis, e) appreciate the process of photosynthesis in nature. 	 The learner is guided to: use a hand lens to observe fresh leaves of plants, draw and label the external parts, use print or non-print media to search for information on the internal structure of the leaf in relation to their roles in photosynthesis, discuss and share with peers, discuss the adaptations of a leaf in relation to their roles in photosynthesis, observe the structure of the chloroplast on charts/photomicrographs, discuss its role in photosynthesis, share with peers, use print or non-print media to search for information on the process and products of photosynthesis, discuss and share with peers, 	What is the importance of photosynthesis in nature?

STRAND 2.0: LIVING THINGS AND THEIR ENVIRONMENT

	 use print or non-print media to search for information on conditions necessary for photosynthesis, discuss and share with peers, set-up experiments to show that light, carbon (IV) oxide and chlorophyll are necessary for photosynthesis and share their findings with peers, <i>(use the starch test)</i>.
--	--

Core competencies to be developed

• Learning to learn: The learner searches for information on photosynthesis, discusses and shares with peers.

• Self-efficacy: The learner successfully carries out experiments on conditions necessary for photosynthesis and shares the findings.

Values:

- Social justice: The learner shares resources equitably while carrying out experiments to show that light, carbon (IV) oxide and chlorophyll are necessary for photosynthesis.
- Integrity: The learner displays honesty while carrying out experiments to show that light, carbon (IV) oxide and chlorophyll are necessary for photosynthesis and presenting their own results.

Pertinent and Contemporary Issues (PCIs)

- Environmental conservation: The learner collects only the required number of leaves to observe the external structure.
- Safety: The learner observes safety precautions while carrying out experiments on photosynthesis.

Link to other learning areas:

• The information on photosynthesis is linked to food production Agriculture and Nutrition.

STRAND 3.0: FORCE AND ENERGY

Strand	Sub Strand	Specific learning outcomes	Suggested learning experiences	Key inquiry question(s)
3.0: FORCE AND ENERGY	 3.1 Curved mirrors (18 lessons) Types of curved mirrors Image formed by concave and convex mirrors (locating images, characteristics of images and uses of curved concave and convex mirrors) Applications of curved mirrors in day to day life. 	 By the end of the sub strand, the learner should be able to: a) describe types of curved mirrors, b) draw ray diagrams to locate images formed by concave and convex mirrors, c) describe the characteristics of images formed by concave and convex mirrors, d) explain the uses of concave and convex mirrors in day to day life, e) appreciate the applications of curved mirrors in day to day life. 	 The learner is guided to: discuss the types of curved mirrors (concave, convex and parabolic surfaces), discuss with peers the terms used in curved mirrors (aperture, pole, centre of curvature, principal axis, radius of curvature, principal focus, focal length and focal plane), carry out activities to locate position of images formed by concave and convex mirrors, illustrate image positions for various object positions in concave and convex mirrors, discuss the characteristics of images formed by curved mirrors (object at infinity, beyond <i>C</i>, at <i>C</i>, between <i>C</i> & <i>F</i>, at <i>F</i> and between <i>F</i> and <i>P</i>), discuss the applications of concave and convex mirrors in day to day life (solar concentrators, car headlamps, shaving mirrors, dentists' mirrors, projector lamps, telescopes, mirrors used in supermarkets, driving mirrors), 	How are curved mirrors used in day to day life?

• use digital or print media to explore more information on applications of curved
mirrors.

Core competencies to be developed

- Self-efficacy: The learner exercises leadership skills as they discuss with peers the characteristics of images formed by curved mirrors.
- Communication and Collaboration: The learner develops listening and writing skills while discussing with peers the terms used in curved mirrors.

Pertinent and Contemporary Issues (PCIs):

• Socio-economic issues: The learner relates concepts of reflection at curved mirrors to safety and security as they discuss the applications of concave and convex mirrors in day to day life (*transport and surveillance*).

Values

- Social justice: The learner exercises equity and accord equal opportunity to group members as they discuss the characteristics of images formed by curved mirrors.
- **Responsibility**: The learner exercises excellence as they illustrate image positions for various object positions in concave and convex mirrors.

Links to other subjects:

• **Pre-technical studies**: The learner relates concepts in curved mirrors to hairdressing and beauty therapy.

Strand	Sub Strand	Specific learning outcomes	Suggested learning experiences	Key inquiry question(s)
3.0: FORCE AND ENERGY	 3.2 Waves (16 lessons) Generation of waves Classification of waves as longitudinal and transverse Characteristics of waves Remote sensing Applications of waves in day to day life (medical - ultrasound, X- rays, CT scans, MRI scans, cancer therapy and laser surgery; communication - radar, radio, cell- phone, television, Wi-Fi and 	 By the end of the sub strand, the learner should be able to: a) describe generation of waves in nature, b) classify waves as longitudinal and transverse, c) describe basic characteristic of waves in nature, d) describe remote sensing in relation to waves, e) describe applications of waves in day to day life, f) appreciate the applications of waves in day to day life. 	 The learner is guided to: brainstorm on the meaning of wave as used in science, carry out activities to demonstrate generation of waves in nature and classify them into longitudinal and transverse (<i>use a slinky spring, skipping rope, water in a basin, a source of sound/speaker, animations on wave</i>), Carry out activities to demonstrate the parts of a wave (<i>amplitude, wavelength, frequency, period, wave speed, phase; include wave equations; velocity=wavelength x frequency</i>), carry out activities in groups to demonstrate characteristics of waves (<i>straight line motion, reflection, bending of waves, movement around objects</i>) discuss remote sensing in relation to waves, (<i>reflection, absorption, and transmission of electromagnetic radiation at different wavelengths</i>), use digital or print media to search for more information on the relationship between 	How are waves applied in our day to day life?

operation of drones; cooking - microwave)		 remote sensing and waves, discuss the applications of waves in real life situations.

APPENDIX

Assessment Methods in Science	Learning Resources	Non-Formal Activities
• Reflections	• Laboratory Apparatus and Equipment	• Visit the science historical sites.
• Game Playing	• Textbooks	• Use digital devices to conduct
Pre-Post Testing	• Models	scientific research.
Model Making	• Digital media (Radio and TV	• Organising walks to have live learning
• Explorations	education programmes, kenya	experiences.
• Experiments	education cloud and OERs)	• Developing simple guidelines on how
• Investigations	• Print media (charts, pictures,	to identify and solve some community
• Conventions, Conferences and	journals, magazines)	problems.
Debates	Digital Devices	 Conducting science document
Teacher Observations	• Software	analysis.
• Project	• Recordings	• Participating in talks by resource
• Journals	• Resource persons	persons on science concepts.
Portfolio		• Participating in science clubs and
Oral or Aural Questions		societies.
• Learner's Profile		• Attending and Participating in Science
Written Tests		and Engineering fairs.
Anecdotal Records		• Organising and participating in
		exchange programs.
		• Making oral presentations and
	_	demonstrations on science issues.

CSL AT GRADE 9

Introduction

In Grade 9, learners will undertake an integrated Community Service Learning (CSL) project of choice from a single or combined subject. The CSL project will enable the learner to apply knowledge and skills from other subjects to address a problem in the community. The implementation of the integrated CSL project will take a Whole School Approach, where all members of the school community including teachers, school administration, parents/guardians/ local community and support staff. It will be a collaborative effort where the teacher of Social Studies coordinates and works with other subject teachers to design and implement the integrated CSL project. The teachers will select a theme drawn from different Learning Areas and the broader categories of Pertinent and Contemporary Issues (PCIs) for the CSL project. It should also provide an opportunity for development of core competencies and nurturing of values. Learners will undertake a **variety of** integrated CSL group projects in teams of following a 6-step milestone approach as follows:

Milestone	Description	

Milestone 1	 Problem Identification Learners study their community to understand the challenges faced and their effects on community members. Some of the challenges in the community can be: Environmental degradation Lifestyle diseases, Communicable and non-communicable diseases Poverty Violence and conflicts in the community Food security issues
Milestone 2	Designing a solution Learners create an intervention to address the challenge identified.
Milestone 3	Planning for the Project Learners share roles, create a list of activities to be undertaken, mobilise resources needed to create their intervention and set timelines for execution
Milestone 4	Implementation The learners execute the project and keep evidence of work done.

Milestone 5	Showcasing /Exhibition and Report WritingExhibitions involve showcasing learners' project items to the community and reflecting on the feedbackLearners write a report detailing their project activities and learnings from feedback
Milestone 6	Reflection Learners review all project work to learn from the challenges faced. They link project work with academic concepts, noting how the concepts enabled them to do their project as well as how the project helped to deepen learning of the academic concepts.

NOTE: The milestones will be staggered across the 3 terms of the academic calendar.

Assessment of CSL integrated Project

Assessment for the integrated CSL group projects will be conducted formatively. The assessment will consider both the process and end product. This entails assessing each of the milestone stages of the integrated CSL group projects. They will focus on 3 components namely: skills from various learning areas applied in carrying out the projects, core competencies developed and values nurtured.
